

Norhanani Nadzirah MOHD TAIB and Ketan PANDE

A 62-year-old man presented with multiple swellings over his hands and feet of more than five years duration. He was under the care of physicians for treatment of a metabolic condition for over eight years. Patient was requesting excision of the lumps over his great toes hence plain radiographs (**Panel**) of both feet were requested.

What is diagnosis?

Answer: refer to page 156
